

Secure Mobility Faceoff

A Windows 8.1 technology, Windows To Go, along with IronKey Workspace, delivers enterprise security and manageability in a ruggedized, secure USB flash drive, thereby protecting company data, hardware and software from being compromised in mobile applications. All at a fraction of the cost of a laptop.

The grid below compares IronKey Workspace to a laptop on several mobility evaluation criteria that are critical to IT.

Laptop

VS

IronKey
Workspace

Security

- Local OS vulnerable to attack, misuse
- Focus on hard disk encryption decreasing

44% of IT execs rate encryption and other data loss technologies important, down from 49% one year earlier*

- All data stored locally on IronKey drive
- Leaves no trace on host machine
- Hardware encrypted

Manageability

- OS image, applications centrally managed
- Physical security, encryption locally managed

- OS image, applications centrally managed
- Physical security, encryption centrally managed
- Supports remote wipe, detonation

Deployment

- Must be catalogued, imaged, tested
- Requires power brick and accessories
- Bulky

- Provision dozens of devices centrally, instantly
- Easy to ship, store
- Lightweight, small footprint - fits in a pocket

Resilience

86% of organizations have had laptops lost or stolen; more than half of them reported a security breach**

28,765

Average number of exposed or compromised records per data breach among US companies.***

- Useless if lost or stolen
- Hardened against physical damage and tampering
- Ruggedized, waterproof to military specifications

Cost

Approximately
\$1,500

for a business laptop

\$5.4 million: cost of average data breach for US companies***

Approximately
\$179

included with Windows Software Assurance license
